I PROFESSIONAL EXPERIENCE

Jul 2022 – Present

Walmart Global Tech, Reston, VA

Software Engineer (SWE II & SWE III)

- Re-architected Node.js return services to decouple workflows from POS constraints, enabling browser-based cross-device execution; introduced request-level authorization with digital signature validation for secure prescription returns
- Built real-time instant refund system for in-store marketplace transactions, replacing batch reconciliation pipelines with synchronous processing and reducing operational latency in store refund flows
- Developed React Native applications for Android, iOS, and kiosk-based return systems, integrating external hardware APIs and maintaining synchronized return state across distributed client and backend services
- Engineered Angular + Node.js POS workflows supporting multi-entity marketplace and third-party returns, implementing dynamic routing and complex rule evaluation across heterogeneous return scenarios
- Led platform modernization for in-store returns infrastructure:
 - Migrated services to Docker and Kubernetes-based private cloud infrastructure, improving deployment consistency and environment parity
 - Introduced feature flag system (CCM) to support gradual rollout of cloud-native endpoints while maintaining backward compatibility
 - Replaced legacy redirect architecture with configurable fallback model enabling parallel execution of legacy and modern flows for zero-downtime migration
- Optimized Java 8 / Spring Boot refund computation engine by eliminating redundant service-layer logic and improving performance under high transaction throughput conditions
- Led migration to Artifactory with automated versioning strategy, eliminating cross-branch conflicts and improving build reliability by **100%**
- Reduced feature flag complexity from **46 to 22**, streamlining release management and decreasing deployment overhead by **10 minutes per release**
- Integrated SonarQube into CI/CD pipeline, enforcing quality gates and increasing test coverage visibility to **50%**, improving pre-production defect detection
- Collaborated across UI/UX, backend, and product teams; onboarded **4 engineers** and contributed to system-wide knowledge transfer and delivery consistency

I INTERNSHIPS

- Walmart Global Tech Intern: Built Angular UI feedback flows and optimized logging/retention systems
- ComScore Inc. Intern: Built Python/SQL data pipelines and Qlik dashboards for TV market analytics
- Two Six Labs Intern: Researched network security and ML techniques

I EDUCATION

GEORGE MASON UNIVERSITY

M.S. Computer Science May 2022

B.S. Computer Science May 2021

I SKILLS

Languages: JavaScript, TypeScript, Java, Python, C, C++, SQL

Frameworks: React, React Native, Angular, Node.js, Spring Boot

Tools: Docker, Kubernetes, AWS, CI/CD, Git, SonarQube, Artifactory

Platforms: Android, iOS, Linux/Unix, CCM
